Introduction to HuggingFace

- HuggingFace is a machine learning and data science platform empowers users to **build, train, deploy and perform continuous integration and continuous deployment of machine learning models**
- HuggingFace has emerged as a prominent player in the ever-evolving landscape of machine learning and artificial intelligence
- HuggingFace is the place for open source generative models, where we can access any model and understand the code behind it
- It hosts **1000+ pre-trained models, datasets and demos**

HuggingFace Models

- HuggingFace models are designed to understand and work with human language. They can read, write, translate, summarize, and do many other with text.
- Imagine having a library of pre-trained brains that understand language really well. That's what HuggingFace models are! They're already trained on tons of text from the internet, books, and articles, so they're really good at understanding and generating text.
- These models aren't just smart; they're top-of-the-line smart! They've been tested against all kinds of language tasks, like understanding what a sentence means, answering questions, or even writing stories. They often outperform other methods, so you know you're getting the best tools available.

HuggingFace Datasets

- HuggingFace Datasets serves as a centralized repository containing a wide range of datasets crucial for training and evaluating machine learning models, particularly those focused on natural language processing (NLP). These datasets cover diverse tasks like text classification, sequence labeling, and language generation.
- Each dataset available through HuggingFace is curated and formatted to maintain consistent quality standards. This consistency ensures that researchers and practitioners can rely on the integrity of the data when training and testing machine learning models.

HuggingFace Spaces

- HuggingFace Spaces offer a simple way to host ML demo apps directly on your profile or your organization's profile. This allows you to create your ML portfolio, showcase your projects at conferences or to stakeholders, and work collaboratively with other people in the ML ecosystem.
- Within HuggingFace Spaces, users can organize their machine learning projects effectively. This may include features for task assignment, project milestones, version control, and documentation, streamlining project management processes.

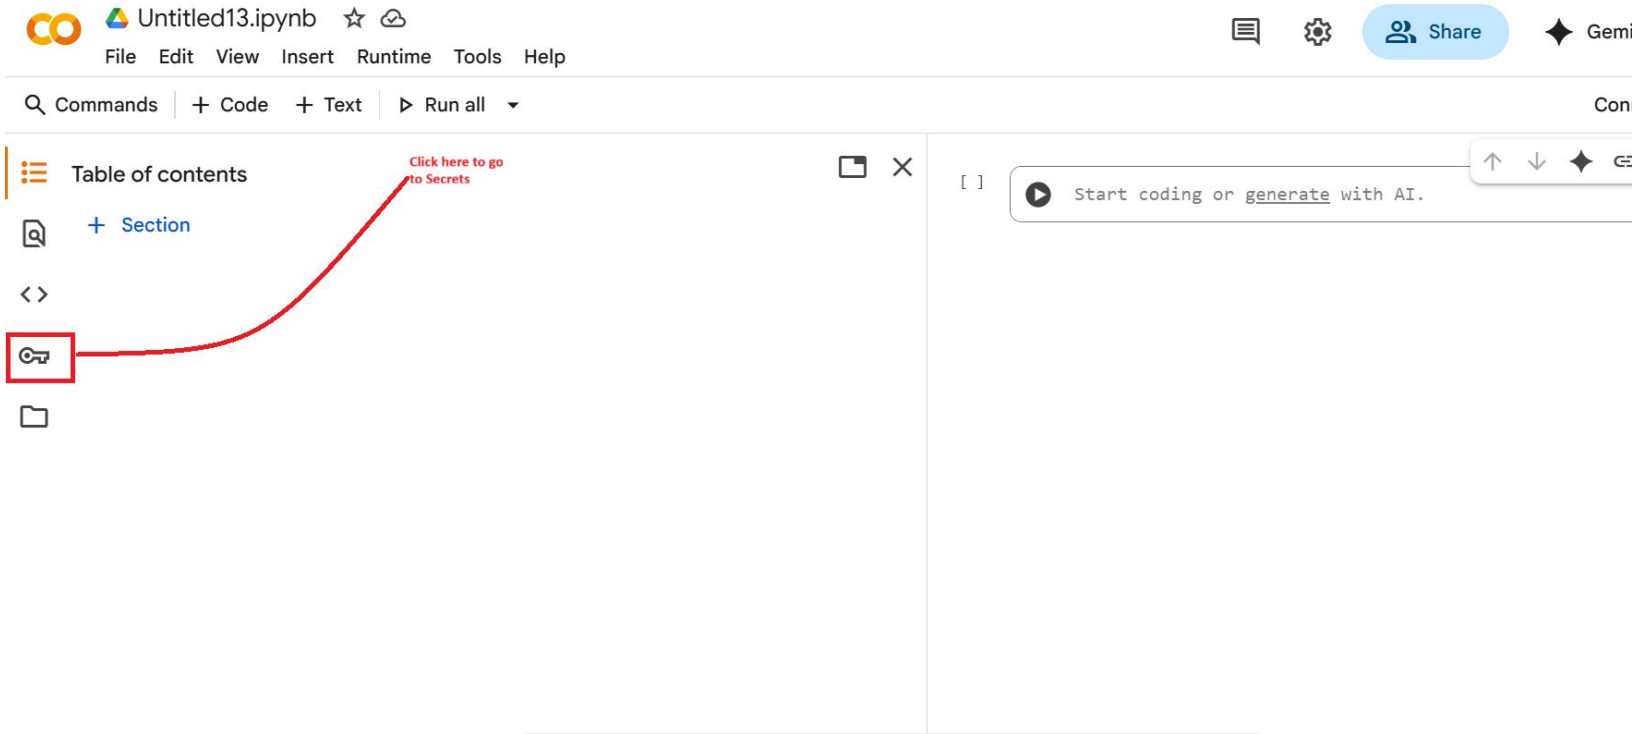
Setting HF_Token in Colab

1. Click on the **Key Icon** on the left panel in Google Colab Notebook.

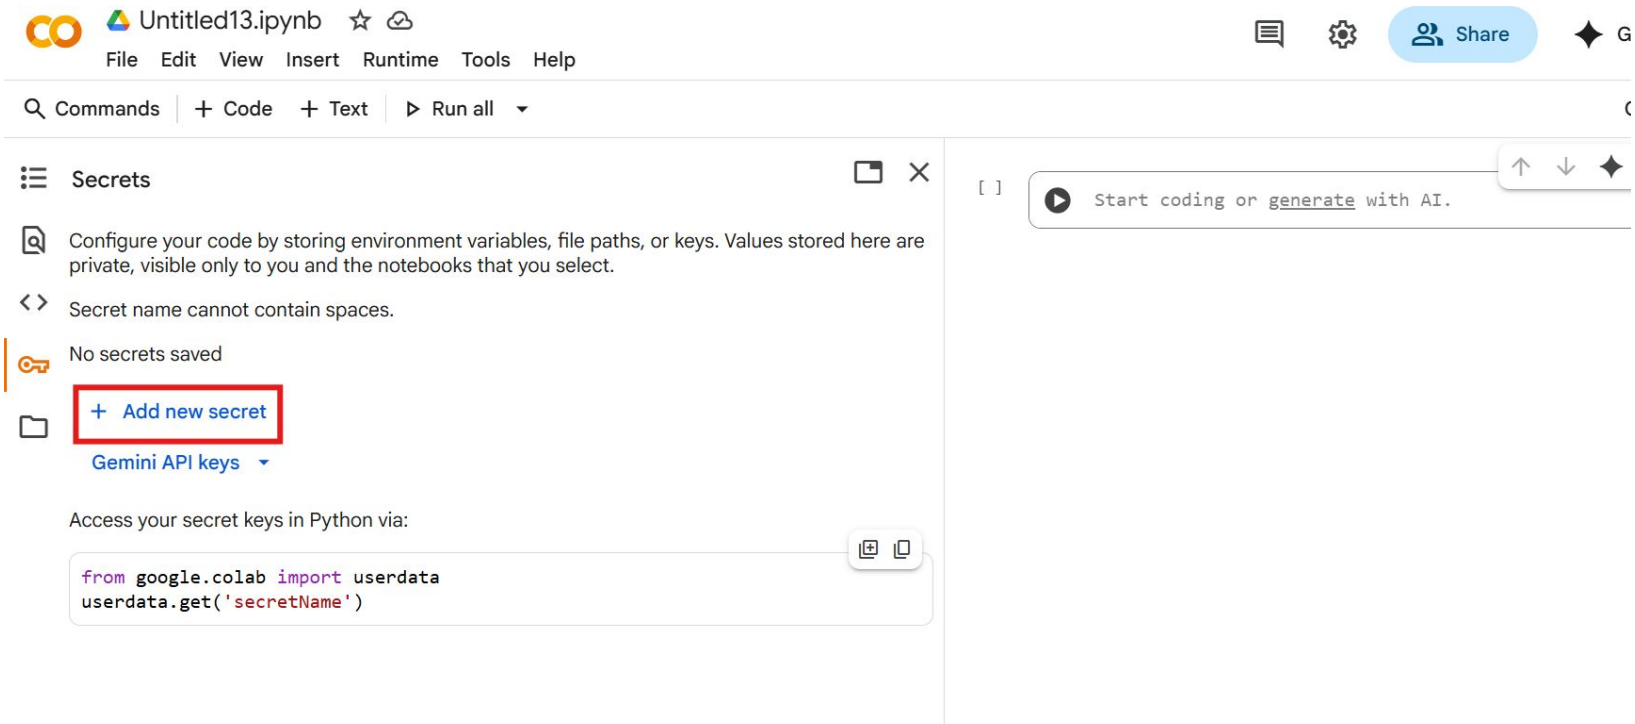


This file is meant for personal use by zareh.vazquez@sap.com only.
Sharing or publishing the contents in part or full is liable for legal action.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Setting HF_Token in Colab

1. Click on **+ Add new secret.**



This file is meant for personal use by zareh.vazquez@sap.com only.
Sharing or publishing the contents in any form is strictly prohibited.
Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Setting HF_Token in Colab

1. Name the token "**HF_Token**", paste the **"Access Token"** in the Value field and toggle the **Notebook access** to On.
2. Now you can use the HuggingFace models in the Google Colab Notebook.
